

# Requirements for Final Draft of CCP

(Make a copy of this document and submit it with everything filled in below)

**Your name:**

**Link to your Github repository:**

**Link to your Github pages site:**

**What breakpoint did you set for the desktop:**

*(aka what is the width of your second media query? )*

**The table below is the rubric.**

For each criteria, tell us if you completed the requirement, a description of how you completed it (when applicable), and where we can find it on your site.

Criteria	Pts
<b>Skip to content link works on all of the pages. Is hidden initially and should appear in focus.</b>	<b>5pts</b>
<ul style="list-style-type: none"><li>- Where can we find it</li></ul>	Skip to main can be found in my css under the Skip to main comment. Tab to focus on the upper left hand corner
<b>The navigation section is styled. The link to the current page should be styled uniquely.</b>	<b>4pts</b>
<ul style="list-style-type: none"><li>- Specifics of implementation</li><li>- Where we can find it</li></ul>	I implemented a highlighted box for my navigation style. This can be found at the top of the css document.
<b>The site is successfully hosted via GitHub Pages. There can not be any broken images or links. There are divs and other semantic tags for containers.</b>	<b>3pts</b>
<ul style="list-style-type: none"><li>- Did you complete it?</li></ul>	Yes
<b>Uses different grid in all three sizes. There should be significant changes between the three views.</b>	<b>5pts</b>

<ul style="list-style-type: none"> <li>- Specifics of implementation</li> <li>- Where we can find it</li> </ul>	All media queries are found under the foundational CSS at the bottom. Grid implementation was a bit difficult and i couldn't get everything to work as intended
<b>What topic/approach did you implement to show mastery of a topic we didn't cover? It must be unique.</b>	<b>5pts</b>
<ul style="list-style-type: none"> <li>- Specifics of implementation</li> <li>- Where we can find it</li> </ul>	I implemented some animation found at the beginning of my css document. It should be an animation for each page.
<b>JavaScript is implemented somewhere on the site. (small demo is fine!)</b>	<b>3pts</b>
<ul style="list-style-type: none"> <li>- Where can we find it</li> </ul>	Java can be found in the index document.
<b>Deductions</b> <b>The site must validate via W3, wave, and aXe (-5 each)</b> <b>No reset or used incorrectly (-2)</b> <b>Not mobile first - content doesn't fit or using max-width (-5)</b> <b>Still not using proper naming conventions (-2)</b>	
<ul style="list-style-type: none"> <li>- Have you checked for all of these?</li> </ul>	

Total: -/25
